

EweMax 19

A supreme 19% protein, extra high energy ewe feed

Nutritional Details			Minerals & Vitamins		
Oil	%	4.5	Vitamin A	iu/kg	10,000
Protein	%	19.0	Vitamin D ₃	iu/kg	2,000
Fibre	%	9.0	Vitamin E	mg/kg	150
Ash	%	8.0			
Starch & Sugars	% DM	30.5	Magnesium	%	0.5
DUP	% CP	36.0	Selenium	mg/kg	0.70

- **Very high DUP** - from our **AminoMax** and hi-pro soya. For maximising lamb birth weights, milk production and milk quality.
- **Maximum Energy** – our highest energy ewe feed, split between starch, digestible fibre, oil, and fats.
- **Safe Starch** –from a high maize inclusion. Maize has a higher proportion of undegradable starch that will by-pass rumen fermentation, helping to minimise the risk of acidosis.
- **SafMannan** – for increased production of immunoglobulin (IgG) in ewe colostrum, aiding in the process of achieving adequate passive transfer of immunity from ewe to lamb.
- **High Vitamin E** – included at the recommended level of 150 mg/kg, to increase lamb survival, vigour and build a strong immune system.
- **High Selenium content** – to help towards the prevention of Selenium deficiency and boost lamb vigour.
- **Phased Magnesium inclusion** – Overfeeding magnesium during pregnancy can increase the incidence of hypocalcaemia, however a deficiency in newly lambed ewes grazing spring grass will lead to hypomagnesaemia. The magnesium content is therefore kept at modest levels during the winter and increased to 0.45% in March and 0.50% in April.

Situations to use:

- Highly prolific flocks.
- To be fed as part of a planned diet with silage, hay, straw or grass
